

▶ Air Distribution Manifolds

Air Distribution Manifolds are manufactured to order, allowing complete flexibility in design, and can be supplied either single or double sided, fitted with Ball Valves or Needle Valves.

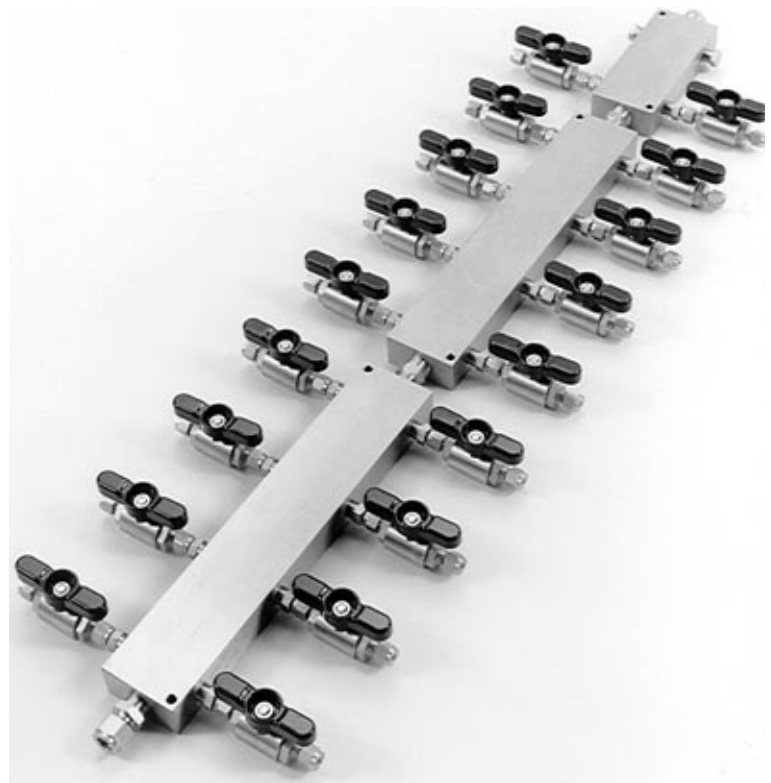

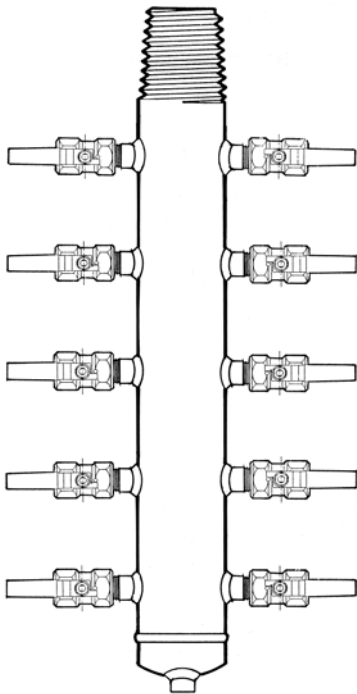

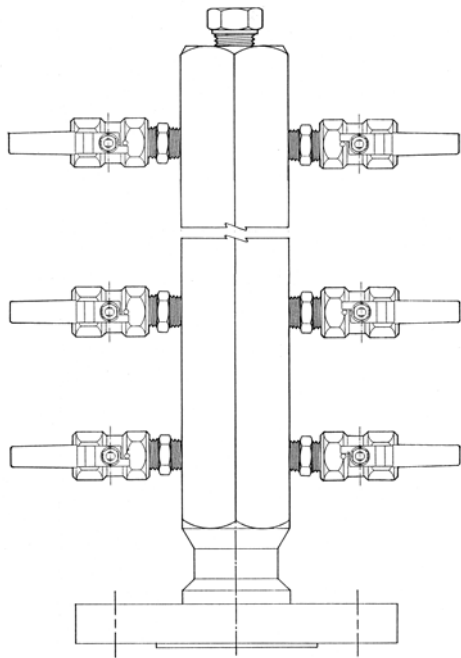

Special attention is given to valve operation - our Manifolds are always designed to ensure that the valves can be conveniently operated.

Inlet can be flanged, screwed or socket weld, the drain can be fitted with a valve or plugged.

Working pressures are usually determined by the pressure rating of the valves:
1000PSI - 2000PSI - 3000PSI - 6000PSI - 10,000PSI.

Please refer to the appropriate valve data sheet for more information.

Mounting holes or brackets can be supplied.

new

We have added a new miniature Needle Valve to our range, available in 1/8" and 1/4" sizes with NPT, BSPP or BSPT threads, this valve is the perfect choice for Air Distribution Manifolds, where its compact size and low unit cost can offer significant savings. Please ask for more details.
